

STORMWATER ENGINEERING PROJECTS

There are five (5) projects included in this section. The total estimated cost of these four projects is \$3,500,000. The FY 2008 program provides supplemental funding to continue several programs including the program for stream flow gauge monitoring of local streams for water quantity and water quality. Additionally this year's program will provide supplemental funding for Stormwater Facility Planning started in Fiscal Year 2006 that will coordinate with Watershed Facility Planning (Infrastructure Engineering Projects) efforts, as well as plan and prioritize stormwater replacement and renewal projects funded through existing and proposed stormwater rates. The District is positioning itself to manage the majority of future Stormwater Capital Programs with in-house engineering staff. Two (2) design contracts to assist with design of select stormwater projects during Fiscal Year 2008, while the District is in the process of adding and training in-house design staff, are also included.
