

STORMWATER CONTINUED PROJECTS

Some of the District's Stormwater projects are continued from previous fiscal years due to difficulties in easement acquisition, the permit process from other agencies, design revisions or status, or other special requirements or issues.

There are sixteen (16) projects that were identified in previous budget supplements that are still in the design, permitting, and/or easement acquisition process. These projects have a total estimated cost of \$6,445,000.

The fiscal year indicated in parentheses at the end of each project title indicates the budget year that the project was originally planned. The revenue to construct these projects comes from the appropriate Operation, Maintenance, Construction, and Improvement (OMCI) Fund.
